Matheus Werneck

360-550-5331 | matheushydewerneck@gmail.com | Seattle, WA 98105 | LinkedIn

Education

University of Washington | Seattle/Bothell, WA
Computer Science and Software Engineering Major
Applied Mathematics Minor | Expected Graduation: 03/2028

- **GPA**: 3.75
- **Relevant coursework**: Calculus (1, 2, 3), Java Programming (1, 2), Data Structures and Algorithms (C++), Network Architecture, and Applied Linear Algebra

Relevant Experience

TrickFire Robotics| Bothell, WA
Software Developer | 03/2025 - 09/2026

- Developed a CO2-based life detection system in Python on Ubuntu, processing live sensor data received over Bluetooth
- Built in timing tolerances for device and Bluetooth latency and added validation using reading differences and running averages to flag implausible data
- Transmitted processed data as a payload to mission control for display in a readable format

Vacasa | Bainbridge Island, WA
House Cleaner | 06/2025 - 09/2025

- Actively engaged in a continuous cycle of independent and collaborative work to execute a comprehensive cleaning and preparation process for Airbnb properties.
- Meticulously deep-cleaned throughout the house
- Systematically managed inventory
- Coordinated with team members to ensure each property met the highest standards of guest readiness.

Projects

Homelab / Self-Hosted Infrastructure

- Deployed and managed a Proxmox virtualization environment hosting many VMs and containers with several months of continuous uptime
- Run private and public-facing services natively and in Docker containers, including media streaming and photo management platforms
- Secured remote access with Tailscale and WireGuard, providing encrypted connectivity to internal services without exposing them to the public internet

Password Generator

- Designed a password generator that would create random, secure passwords
- Optimized the generator so that it would run efficiently while staying secure
- Modified the Code to be compatible with a web browser as an extension

Tic-Tac-Toe Simulator (Academic Project)

- Simulated a Tic-Tac-Toe Board as a class in Java
- Implemented a system to calculate every possible outcome of a game of Tic-Tac-Toe
- Translated the outcomes into a tree where every node is a different possible move in Tic-Tac-Toe

Global Game Jam 2026 Bitmask Carnival

- Participated in the 2026 Global Game Jam with the UWB Husky Game Dev club
- Created a puzzle system that combined complex UI elements with backend code
- Collaborated with a UI, art, and sound team to efficiently implement the project without many Git conflicts
- Worked efficiently as the game jam took place over 47 hours.

Skills

- **General Skills**: Time management, Calculations, Problem Solving, Collaborative Problem Solving, Leadership, Git
- **Programming Languages**: Java, C++, C#, Python
- **Tech Skills**: Linux (Arch/Ubuntu), Git, LaTeX, MS Office, Docker, VMs/Containers, Remote Access
